

Half-Yearly Release Review

A readiness and marking-consistency check across LKG, SKG, Class I and Class II before Half-Yearly report cards are released to parents.

First Half-Yearly 2026-27 • window 1 Feb – 30 Jun 2026 • 232 pupils • compiled 21 August 2026

Recommendation

The data is complete. Release SKG, Class I and Class II. Hold LKG pending one conversation.

Every mechanical prerequisite is met in all four classes: co-scholastic grading is 100 % complete, no assessment session is left unlocked, attendance is recorded for every pupil, and class tests are entered where the class has one. Nothing is missing.

The reason to pause on LKG is not missing data — it is that LKG's marks were produced on a visibly different scale from the other three classes, and 61 of its 73 children would receive *Beginning* as a result. Section 3 sets out the evidence.

1. Readiness — all four classes

Checked directly against the live database on 21 August 2026, not from any earlier audit.

CLASS	PUPILS	SESSIONS	CO-SCHOLASTIC	CLASS TEST	ATTENDANCE	STATUS
LKG	73	22	438/438	— n/a	84 days	Complete
SKG	45	35	270/270	2 subjects	84 days	Complete
Class I	59	30	413/413	5 subjects	95 days	Complete
Class II	55	35	385/385	6 subjects	95 days	Complete

- **No unlocked sessions.** All 122 assessment sessions inside the half-yearly window are locked or reviewed. Nothing is stranded in draft.
- **Class I and Class II were completed on the morning of 21 August** — the Aptitude, Arts & Craft and Val. Edu. columns flagged as empty in the 20 August audit have since been filled.
- **LKG correctly has no class test.** It is excluded by configuration; its grades come from fortnightly assessment alone.
- **SKG working days corrected** from 85 to 84 to match LKG, with three pupils on perfect attendance adjusted to 84/84 so no card reports more days present than exist.

Not yet done: no report card has been generated for any class, and co-scholastic grids remain unlocked. Locking them before generating prevents a teacher editing a grade out from under a card already sent home.

2. Where the school landed

Every pupil's overall score is the mean of their subject scores, each on the 0–5 scale. The five bands are fixed: Advanced 4.5+, Proficient 3.5+, Developing 2.5+, Beginning 1.5+, Not Yet below 1.5.

CLASS	MEAN	MEDIAN	ADVANCED	PROFICIENT	DEVELOPING	BEGINNING	NOT YET
LKG	2.20	2.23	0	0	12	61	0
SKG	3.25	3.32	0	0	44	1	0
Class I	2.84	2.94	0	3	48	5	3
Class II	3.07	3.06	0	4	49	2	0
All 232	—	—	0	7	153	69	3

Share of pupils in each band, school-wide

Advanced		0 · 0.0%
Proficient		7 · 3.0%
Developing		153 · 65.9%
Beginning		69 · 29.7%
Not Yet		3 · 1.3%

Two-thirds of the school sits in *Developing*, which for a half-yearly point in the year is an unremarkable and healthy result. The concentration to watch is *Beginning*: 69 pupils, of whom **61 are in LKG alone**.

Correction to an earlier figure. A preliminary count circulated on 21 August put 123 pupils in *Beginning*. That count omitted the class-test blend and therefore understated Class I and Class II, whose test marks are strong. The corrected figure, computed the same way the report card itself computes it, is **69**. All numbers in this report include the blend.

3. The LKG anomaly

LKG's result is not explained by the children being young. It is explained by the marking scale actually used.

3.1 What was entered, score by score

Every criterion is scored 0–5 at each fortnightly session. Across the half-year this produced roughly 30,000 individual scores per class. How each class's scores were spread:

CLASS	SCORES ENTERED	0	1	2	3	4	5
LKG	31,180	2.6%	25.0%	33.6%	27.3%	11.6%	0.0%
SKG	31,116	5.7%	2.3%	19.1%	46.4%	23.1%	3.5%
Class I	28,905	3.5%	14.6%	31.6%	36.1%	14.1%	0.1%
Class II	31,724	0.0%	11.5%	39.9%	37.4%	11.1%	0.1%

In 31,180 scores, LKG awarded a 5 exactly zero times. Not once, across 73 children, four subjects and an entire half-year. SKG awarded 1,083. Class I awarded 29 and Class II 44 — both also effectively treating 4 as their ceiling.

The 0–5 scale is identical for every class; there is no per-class cap in the configuration. So the top of the scale was available throughout and, in three of four classes, went essentially unused. LKG also placed a quarter of all its scores at 1, against SKG's 2.3 % — a tenfold difference at the bottom of the scale as well as a total absence at the top.

3.2 Why age does not account for it

If youth and inexperience were the driver, scores should rise with age. Median ages and results run in opposite directions:

CLASS	MEDIAN AGE	MEAN SCORE	EXPECTED UNDER THE AGE EXPLANATION
LKG	4.4 yrs	2.20	lowest — consistent
SKG	5.6 yrs	3.25	higher — consistent
Class I	6.6 yrs	2.84	higher still — but it falls
Class II	7.6 yrs	3.07	highest — still below SKG

Class II pupils are two years older than SKG's and have two more years of schooling, yet score lower. Age explains the LKG–SKG gap; it cannot explain this. A difference in how four teachers use the same scale explains both.

3.3 What this does to the bands

The bands assume the full scale is in play. *Proficient* requires 3.5 and *Advanced* requires 4.5. A teacher whose highest score is 4 can, at best, average 4 — so Advanced becomes arithmetically unreachable and Proficient requires near-perfect 4s throughout. That is why 232 pupils produced **no Advanced grades at all** and only seven Proficient, all of them in the two classes where a class test lifted the average.

4. Class-by-class detail

LKG • 73 pupils • class teacher Kerda Khyrwang

SUBJECT	SESSIONS	MEAN	BAND
Numeracy	6	2.72	Developing
Literacy	6	2.20	Beginning
Rhymes & Stories	6	2.08	Beginning
Arts / Colouring	4	1.83	Beginning

Three of four subjects sit in *Beginning*. Arts/Colouring at 1.83 is the lowest subject mean in the school and is within 0.33 of *Not Yet*. It also had the fewest sessions of any LKG subject.

SKG • 45 pupils • class teacher Vanessa Mary Kharkongor

SUBJECT	SESSIONS	MEAN	BAND
Numeracy	9	3.85	Proficient
Literacy	9	3.62	Proficient
Arts / Colouring	8	2.83	Developing
Rhymes & Stories	9	2.69	Developing

The only class with subject means above 3.5, and the only one making regular use of the top of the scale. Class tests exist for Literacy and Numeracy; Rhymes and Arts are assessment-only, which is permitted.

Class I • 59 pupils • class teacher Dolly Nongsiej

SUBJECT	SESSIONS	MEAN	BAND
Mathematics	6	3.15	Developing
Science	6	3.04	Developing
Khasi	6	2.97	Developing
English I	6	2.55	Developing
English II	6	2.50	Developing

The only class with pupils in *Not Yet* — three of them. English II at 2.50 sits exactly on the Developing boundary, so a small change either way moves pupils between bands.

Class II • 55 pupils • class teacher loh hunlang Nongkhlaw

SUBJECT	SESSIONS	MEAN	BAND
Science	5	3.75	Proficient
Mathematics	6	3.18	Developing
English I	6	3.03	Developing
Khasi	6	2.98	Developing
English II	6	2.75	Developing
Hindi	6	2.73	Developing

The strongest overall profile, and the only class with no pupil below *Beginning*. Science ran one session short of the other five subjects.

5. Attendance

CLASS	WORKING DAYS	CLASS AVERAGE	BELOW 75%
LKG	84	83.2%	11
SKG	84	87.1%	4
Class I	95	91.5%	3
Class II	95	93.4%	0

Attendance climbs steadily with age, as expected. Eighteen pupils fall below 75 %, eleven of them in LKG — worth noting alongside LKG's low scores, since a child present for three days in four has had materially less exposure than the assessment assumes.

Four pupils across LKG, SKG and Class I are recorded present on **zero** days. These are almost certainly children who left during the term but remain on the attendance grid. Confirm before generating, or they will receive a card showing 0 % attendance.

6. What to do before releasing

1. **Ask the four class teachers one question:** “*When did you last award a 5, and what would a child have to do to earn one?*” If three answer that they never give 5s, the pattern is confirmed and it is a staff-calibration matter, not a data fault.
2. **Decide on LKG specifically.** Either accept the marks as they stand and release, or have the LKG marks reviewed against the same standard SKG applied. Sixty-one families receiving *Beginning* is defensible only if the school is confident it means the same thing there as it would in any other class.
3. **Check the four zero-attendance pupils** and remove any who have left the school.
4. **Lock the co-scholastic grids** for all four classes so grades cannot change after cards are issued.
5. **Release SKG, Class I and Class II** — these are complete, internally consistent, and require no further decision.

Nothing in this report requires a change to the software. The calculations are working exactly as designed; what differs is how four people used the same scale. The remedy is a conversation, not a correction.

Compiled 21 August 2026 from the live assessment database. Figures cover the First Half-Yearly window, 1 February – 30 June 2026, and include the 70/30 assessment-to-class-test blend wherever a class test exists. Prepared for internal use ahead of the parent release.
