

Understanding Your Child's Report Card

How to view the Half-Yearly report card online, what the grades mean, and how your child's marks are worked out.

Viewing the report card

The report card is online. There is no login, no password and no app to install — you only need your child's details.

`st-francis-school-a3e7e.web.app / report-card-lookup`

1 Open the page

Type the address above into any web browser on a phone, tablet or computer.

2 Choose your child's class

Select the class from the list — for example LKG, SKG, Class I or Class II.

3 Enter your child's details

Fill in the details the school has on record for your child, exactly as they appear on school documents.

4 View or save the card

The report card opens on screen. Use the

Download PDF

button to save a copy or print it.

If nothing appears: the card may not have been released yet, or a detail may not match the school's records. Cards become visible only after the school releases them. Please contact the school office rather than trying repeatedly.

How your child is assessed

Your child is not judged on a single examination. Instead, teachers assess continuously through the term and combine that with one written test in most subjects.

1 • Continuous assessment, every fortnight

Roughly every two weeks, the teacher assesses each child in each subject. A subject is broken into a number of specific **skills** — for example, in Literacy that might include recognising letters, holding a pencil correctly, or

listening to a story. Each skill is scored separately from 0 to 5.

Over a half-year this produces a large number of observations for every child — several hundred individual scores — rather than one snapshot on one day. A child who has a difficult morning is not penalised for the whole term.

2 • The written class test

Once each half-year, most subjects also have a short written test. The test is marked out of whatever total the teacher sets — commonly 30 — and is then converted onto the same 0–5 scale so it can be combined fairly with the continuous assessment.

Kindergarten note. LKG has *no written test at all*. Its grades come entirely from continuous assessment, which is deliberate — a written examination is not an appropriate way to assess a four-year-old. SKG has tests only in Literacy and Numeracy.

3 • Putting the two together

Where a subject has both, the two are combined in a fixed proportion:

$$\text{Subject score} = \text{continuous assessment} \times 70\% + \text{class test} \times 30\%$$

The greater weight sits with continuous assessment on purpose. Months of observed work tells the school more about a child than a single test morning does. Where a subject has no test, the subject score is simply the continuous assessment score.

A worked example

Suppose a Class II child is assessed in Mathematics. Over the half-year the teacher records scores across all the mathematics skills, and those average out at **3.2**. The child then scores **24 out of 30** in the written class test.

Mathematics — how the subject score is reached	
Average of all continuous assessment scores	3.20
Class test: 24 out of 30	24 ÷ 30
Test converted to the 0–5 scale (24 ÷ 30 × 5)	4.00
Assessment counts for 70% (3.20 × 0.7)	2.24
Test counts for 30% (4.00 × 0.3)	1.20
Mathematics subject score	3.44 → Developing

The same is done for every subject. The child's **overall result** is then the average of all their subject scores, placed into one of the five bands below.

What the grades mean

Every score, whether for a single skill, a subject, or overall, falls into one of five bands.

BAND	SCORE	WHAT IT MEANS
Advanced	4.5 – 5.0	Consistently works beyond what is expected at this stage.
Proficient	3.5 – 4.4	Has securely met what is expected at this stage.
Developing	2.5 – 3.4	Working towards what is expected and making steady progress.
Beginning	1.5 – 2.4	At an early stage with this skill and needs continued support.
Not Yet	below 1.5	Has not yet demonstrated this skill. It remains well within reach.

Please read these as a description, not a verdict. *Beginning* and *Not Yet* describe where a child is on a path, not a failure. They are most common in the youngest classes, where children are meeting many of these skills for the very first time. What matters far more than the band in any one half-year is the direction of travel between the Half-Yearly and Final Term cards.

The rest of the card

Co-scholastic grades

Alongside academic subjects, the card reports areas such as Physical Education, Singing, Discipline, Neatness and Value Education. These carry a letter grade — O, A+, A, B+, B or C — and are reported **separately on purpose**. They are never mixed into the academic average, so a child's conduct grade can neither lift nor lower their academic result.

Attendance

Shown as days present out of the school's working days for the term — for example **76/84**. Attendance is not part of any grade, but it is worth attention: a child present for three days in four has had noticeably less teaching than the assessment assumes.

The teacher's remark

A short written comment from the class teacher summarising the child's half-year. For the youngest classes the card also carries a running record of observations made at the start of the year, at half-yearly, and at the end of the year.

Questions parents often ask

Why does my child have no marks out of 100?

For these age groups the school reports on demonstrated skills rather than a single percentage. A percentage from one examination morning would tell you far less than several hundred observations gathered across the half-year.

My child did well in the test but the grade seems low.

The written test is 30 % of the subject score. The remaining 70 % comes from work observed over the whole term. A strong test lifts the result but does not by itself determine it.

Can I discuss the grades with the teacher?

Yes, and you are encouraged to. Please contact the school office to arrange a time with your child's class teacher.

Is the Final Term card calculated the same way?

Yes. The same skills, the same 0–5 scale, the same 70/30 combination and the same five bands, so the two cards can be compared directly.
